

DID YOU KNOW?

Fuel used in transportation releases harmful gases that cause air pollution and affect a person's overall health, lowering their life expectancy.

The cumulative years lost due to ill-health and to early deaths constitute the 'health burden' of an activity or a sector. It is measured as Disability Adjusted Life Years (DALY).

1 DALY = One Lost Year of Healthy Life

**YEARS LOST DUE TO
DISABILITY/DISEASES**

**YEARS LOST DUE TO
EARLY DEATH**

*DALY: Disability Adjusted Life Year

DON'T FORGET TO:

- Check Form 22 to know the pollutant emissions released from your vehicles
- Visit <http://www.aeee.in/green-vehicle-rating> and know more about the health costs of your vehicles with Green Vehicle Rating (GVR)
